

🔧 Assembly instructions 🔧

1. Two mounting plates are packed with a mirror

<p>2. Mark the desired hanging area on the wall and draw a line with the help of a landscape</p> <p style="text-align: center;">Hanging point/centre</p>	<p>3. Measure the hanging profile on the back of the mirror</p> <p style="text-align: center;">Measure distance</p>
<p>4. On the wall on which you marked the point, mark the dimension of the profile (distance X)</p> <p style="text-align: center;">Hanging point/centre</p>	<p>5. Drill holes, screw the plates, leaving a distance from the marked edge so that when the mirror is hung, it can be pushed and centered</p> <p style="text-align: center;">Hanging point/centre</p>

ATTENTION! Other fasteners (screws, dowels, etc.) are not sent together, since we do not know what wall the mirror will be hung on.

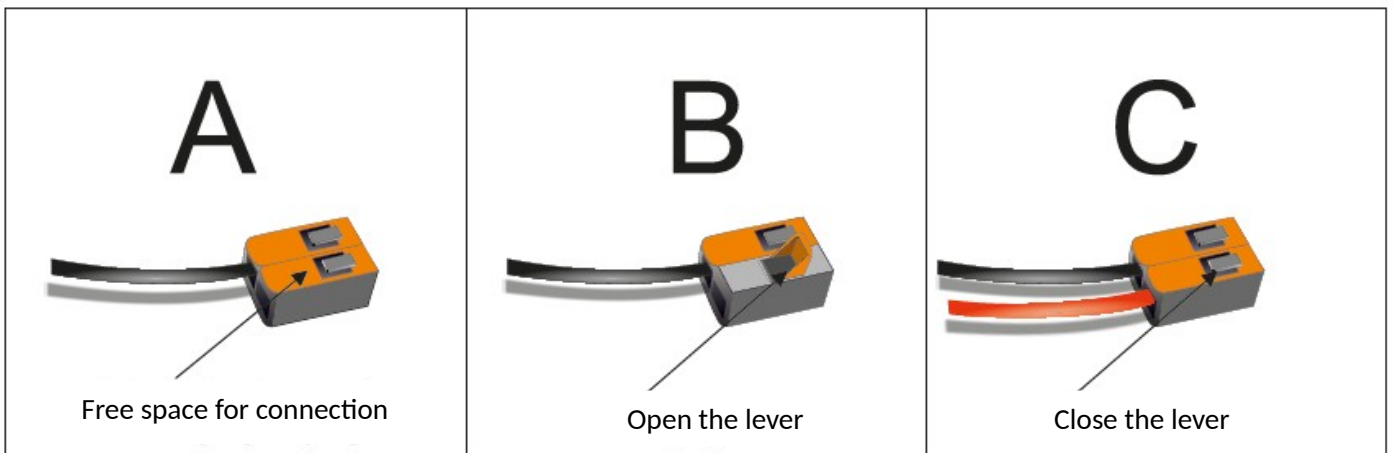

⚡ Electrical wiring ⚡

IMPORTANT! Before starting work, disconnect the power supply to the mirror!

For connection, quick connectors are used.

The connection is shown in figure (A). Unfold the free terminal (B) of the connector plug, insert the cable and clamp the terminal (C). Check that the wires are firmly connected.

If the wires are tightly connected, you can apply the electric voltage.

If you have any questions or problems, when installing the mirror, you can contact by e-mail or phone.
